

## A closer look at the role of Microfilters

Although only small, Microfilters have a big part to play in the correct set up of broadband within the home. Connecting one of them to every telephone socket you use will help to ensure that your broadband runs as fast as possible.

### Key things to remember:

1. Make sure that a Microfilter is the first thing connected to each telephone socket you use – don't forget the one your Sky box plugs into!
2. Check that if you are using an Extension socket that you only have a microfilter at one end of the cable, not at both ends
3. Connect the grey cable from the Sky Wireless Router to the socket marked **MODEM**
4. Connect all other devices that need a phone socket (e.g. phone, alarm system etc) to the Microfilter socket marked **PHONE**
